Education

Siddaganga Institute of Technology — Tumakuru, Karnataka
Bachelor of Technology in Computer Science and Engineering — *Nov 2023 – June 2027*
- CGPA: 8.1

K N I T PU College — Jammu & Kashmir
Class XII (PCM) — *2023*
- Percentage: 90.1%

K N I T PU College — Jammu & Kashmir
Class X (PCM) — *2021*
- Percentage: 91.4%

Technical Skills

Languages: C, C++, Python, JavaScript
Web Development: React.js, Django, Django REST Framework, FastAPI, Streamlit, HTML, CSS
Databases: PostgreSQL, MongoDB, MySQL
Developer Tools: Git, GitHub, VS Code, Postman
Deployment: Vercel, Render
Systems & Networking: Linux, Computer Networking, WebSockets
Security: JWT Authentication, TLS Encryption

Projects

PathMate | *React.js, Django REST Framework, PostgreSQL, JWT, Tailwind CSS, Vercel, Render*
- Built a full-stack mentorship platform connecting students with mentors from similar backgrounds, featuring role-based access control, JWT authentication, and secure protected routes.
- Engineered a multi-parameter filtering system (college tier, domain, starting point) to optimize mentor discovery, backed by complex Django ORM queries and a complete session-booking workflow.
- Implemented asynchronous HTML email notifications via the Brevo REST API and background threading, successfully bypassing cloud infrastructure firewall limitations.
- Designed and developed a premium, responsive glassmorphism UI using Tailwind CSS, featuring custom micro-animations for enhanced user experience.
- Architected a fully decoupled production environment, deploying the frontend on Vercel and the backend API with PostgreSQL on Render. Live at: path-mate-three.vercel.app

Smart Home Energy Conservation System | *Python, FastAPI, Streamlit*
- Designed a software system to monitor, analyze, and optimize household energy consumption using REST APIs built with FastAPI for data ingestion and processing.
- Implemented short-term energy forecasting using a sliding window approach and a scheduling algorithm to optimize appliance usage based on consumption patterns.
- Added anomaly detection logic to identify abnormal consumption spikes and built an interactive Streamlit dashboard to visualize forecasts, schedules, and real-time alerts.

Achievements

Competitive Programming:

- Shortlisted for **HackWithInfy Round 2** (Infosys national-level)
- **Runner-Up** at IEEE coding event
- **3rd place** at ByteSurge contest
- Solved **350+** LeetCode and **1000+** CodeChef/GFG problems
- Active participant in LeetCode and HackerRank coding contests

Hackathons: **5th place** at Hack-CSE-lerate; participated in **4+ hackathons**.

Leadership: Organized a non-technical event under **PATHFINDER** club, managing logistics for **500+ attendees**.
